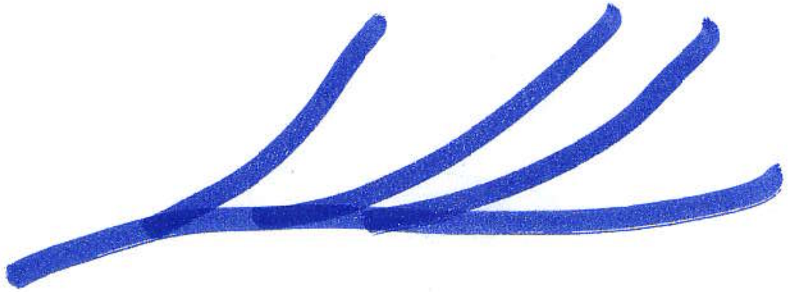
Thm [BI]

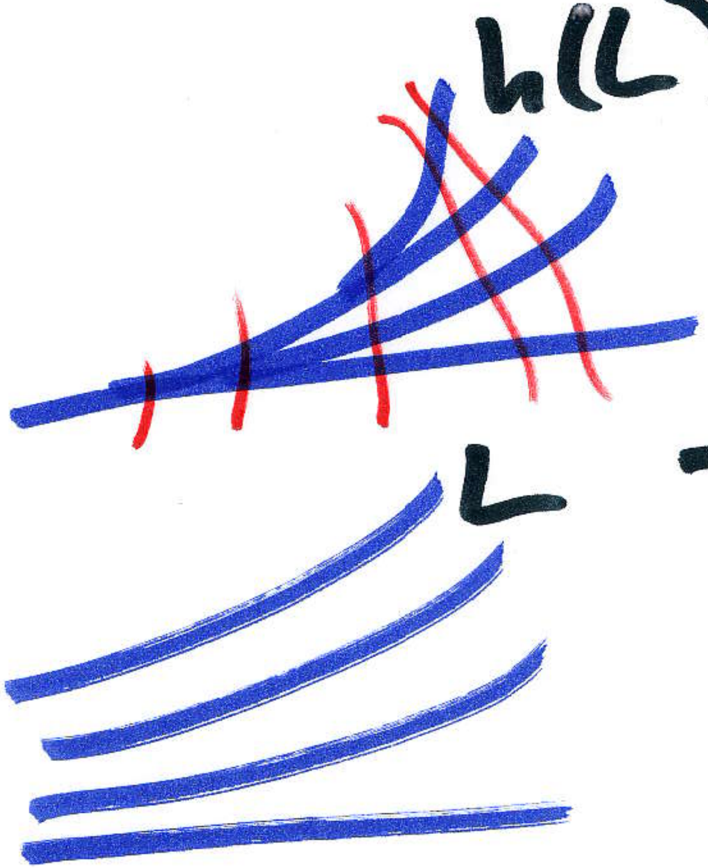
$f: M \circlearrowleft$ p.h., $\dim(M)=3$

$\exists$ branching foln $\tilde{\mathcal{F}}^{cs}$ tangent to $E^{cs}=E^{c}\oplus E^{s}$



$$TM = E^{u}\oplus E^{c}\oplus E^{s}$$

W^{u}



smooth v. field $\pitchfork \mathcal{F}$

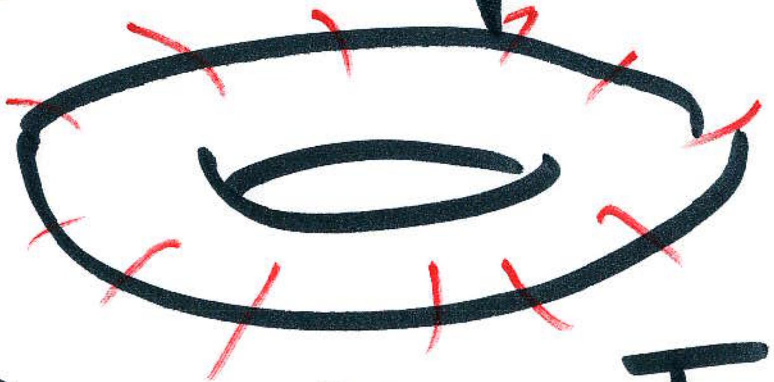
flow to separate leaves

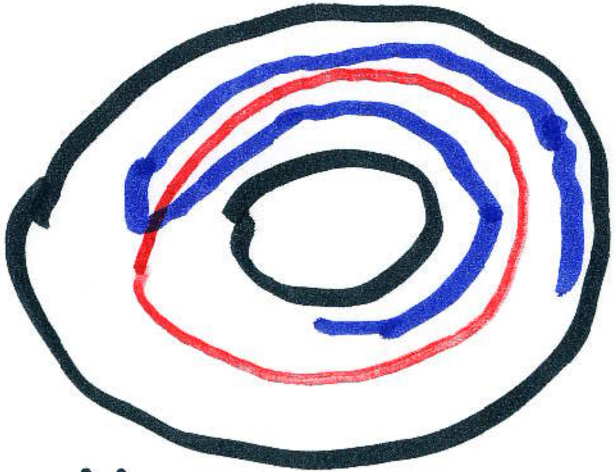
Thm $\forall \varepsilon > 0\ \exists$ foln $\mathcal{F}_\varepsilon$
and an onto map $h : M \circlearrowleft$

- $\|h - id\| < \varepsilon$
- $T\mathcal{F}_\varepsilon$ is ε-close E^{cs}
- $L \in \mathcal{F}_\varepsilon \Rightarrow h(L) \in \mathcal{F}^{cs}$

and $h|_L$ is homeo.

Reeb components





Any foln $\mathcal{F}$ to W^u is Reebless.

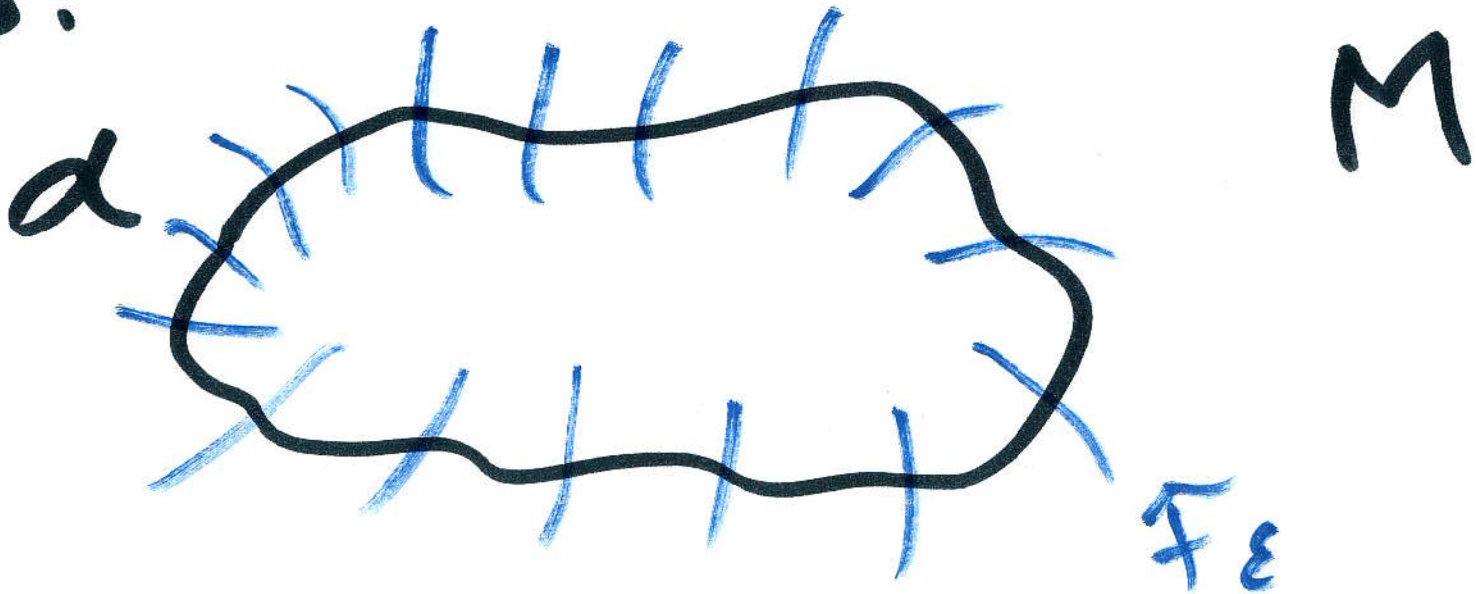
In part, $\mathcal{F}_\varepsilon$ is Reebless.

- each leaf $L \in \mathcal{F}^\varepsilon_\varepsilon$ is π_1-injective

$i : L \longrightarrow M$

$i_* : \pi_1(L) \longrightarrow \pi_1(M)$ is an injection

• no transverse contractible cycles:



$L \in \hat{F}_\varepsilon$ then $h(L) \in \hat{F}^{cs}$

an the embeddings are homotopic

$$\begin{tikzcd}
\pi_1(L) \arrow[r, hook] \arrow[d, phantom, "\cong" rotate=-90] & \pi_1(M) \\
\pi_1(h(L)) \arrow[ur, "\text{injective.}"'] &
\end{tikzcd}$$

No transverse contractible cycles.

Suppose $\alpha \pitchfork E^{cs}$

$$\measuredangle(T\alpha, E^{cs}) > \varepsilon > 0.$$

$\mathcal{F}_\varepsilon$ $\quad \measuredangle(T\mathcal{F}_\varepsilon, E^{cs}) < \varepsilon \quad E^{cs}$

$$\measuredangle(T\alpha, T\mathcal{F}_\varepsilon) > 0.$$

Prop If $f: M \circlearrowleft$ p.h. $\dim = 3$ then the universal cover $\tilde{M}$ is homeo to $\mathbb{R}^3$.

proof $\tilde{M}$  $\tilde{\mathcal{F}}^{cs}$

$\downarrow$

M  $\mathcal{F}^{cs}$

$\hat{\tilde{M}}$

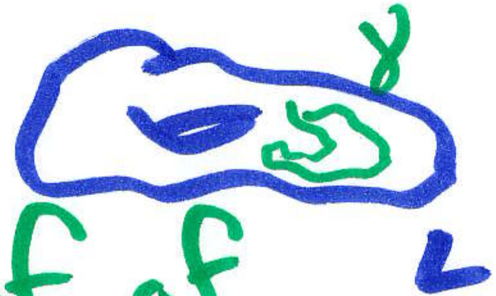
$\hat{L}$

~~S^2~~ or $\mathbb{R}^2$

$T\hat{\tilde{L}} = E^c \oplus E^s$

$\downarrow$

M



Every leaf of $\tilde{\mathcal{F}}^{cs}$ is a plane.

$$\frac{\hat{\tilde{\mathcal{F}}}^{cs}}{\hat{L} \text{ is simp conn}}$$

$[\gamma] = 0 \in \pi_1(M)$

$\Rightarrow [\gamma] = 0 \in \pi_1(L)$

$\Big\downarrow \; \mathcal{F}^{cs}$

$[\hat{\gamma}] = 0 \in \pi_1(\hat{L})$

$$\tilde{\hat{\mathcal{F}}}^{cs} \xleftarrow[\tilde{h}]{\text{planes}} \tilde{\hat{\mathcal{F}}}_\varepsilon$$ is a true foliation by planes.

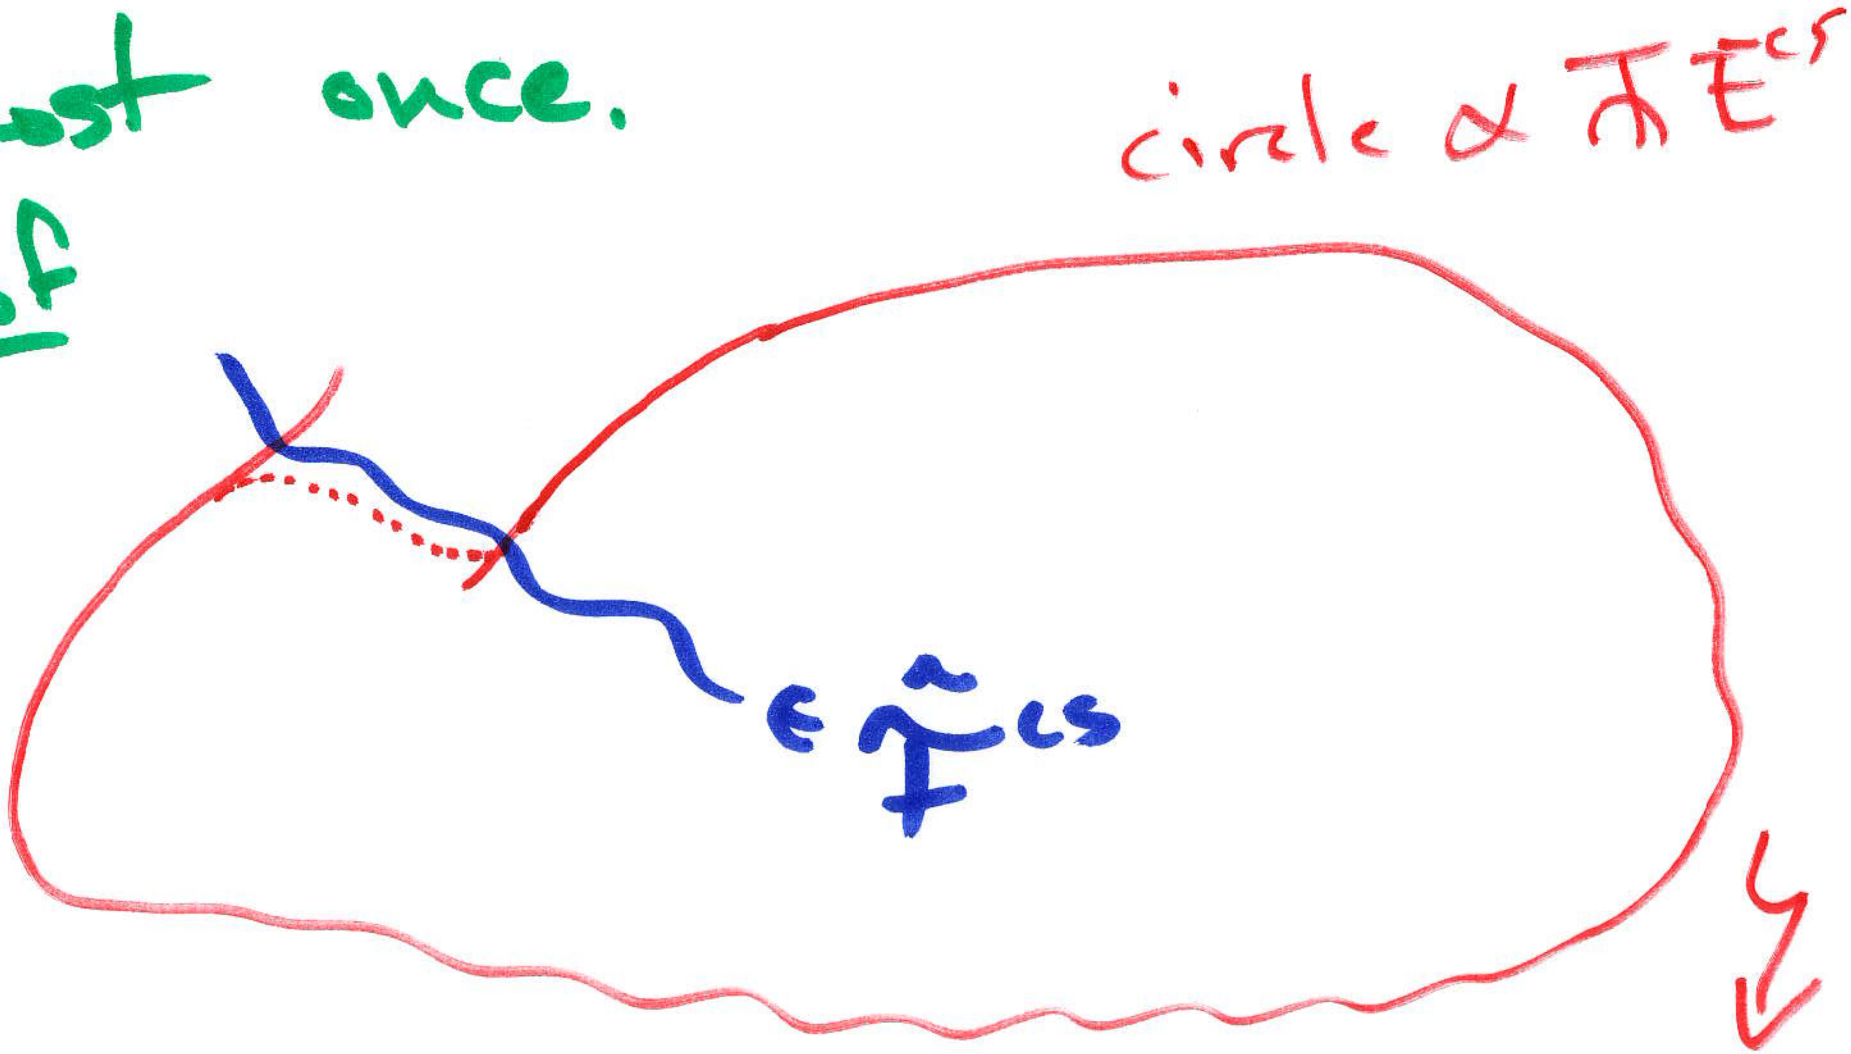
(Palmeira)

$\Longrightarrow \tilde{M}$ is homeo to $\mathbb{R}^3$.

$$\hat{\mathcal{F}}^{cs} \xleftarrow[h]{} \hat{\mathcal{F}}_\varepsilon$$

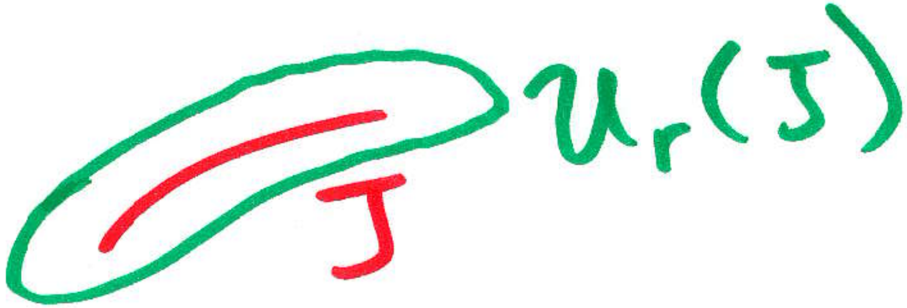
Prop On $\tilde{M}$, each leaf of $\hat{\tilde{\mathcal{F}}}^{cs}$ intersects a leaf $\hat{\tilde{W}}^{u}$ at most once.

proof



Define $\mathcal{U}_r(J) = \{x \in \tilde{M} : \mathrm{dist}(x, J) < r\}$

$J \subset \tilde{M}$

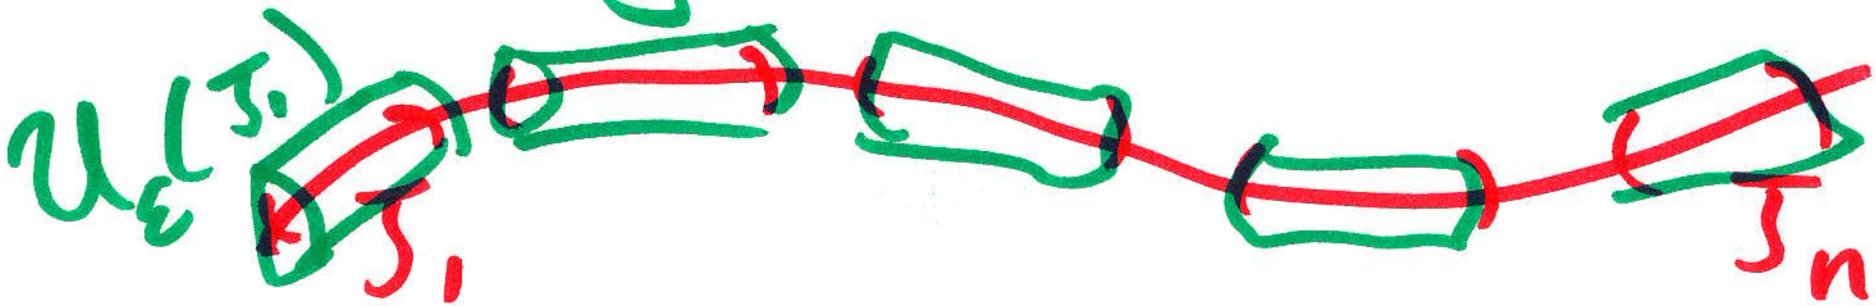


<u>Prop</u> There is $C > 0$ s.t.

$$\mathrm{volume}\ \mathcal{U}_1(J) > C \cdot \mathrm{length}\ J$$

for any unstable curve $J \subset \tilde{M}$.

proof Suppose J is a curve of length $> n$



Suppose

$x \in \mathcal{U}_\varepsilon(J_7) \cap \mathcal{U}_\varepsilon(J_9) \neq \emptyset$

each J_k has length $= 1$.

$\mathcal{U}_\varepsilon(J_k) > C$.

↯

$M = \mathbb{T}^3 \quad \tilde{M} = \mathbb{R}^3$ w/ std volume.

Suppose $f : \mathbb{T}^3 \circlearrowleft$ p.h.

Lift $\tilde{f} : \mathbb{R}^3 \circlearrowleft$ there is a group aut $f_* : \pi_1(\mathbb{T}^3) \circlearrowleft$

s.t.

$\gamma \in \pi_1(\mathbb{T}^3)$ $\quad f_*(\gamma) \circ \tilde{f} = \tilde{f} \circ \gamma.$

$\gamma : \mathbb{R}^3 \circlearrowleft$

$f_* \pi_1(\mathbb{T}^3) \cong \mathbb{Z}^3$

$\exists$ linear map $\tilde{A} : \mathbb{R}^3 \to \mathbb{R}^3$

$A : \mathbb{T}^3 \to \mathbb{T}^3$

so $A_* = f_*$.

A "linear part" of f.

A is partially hyp

A has eigenvalues

$$|\lambda_1| \le |\lambda_2| \le |\lambda_3|$$

Want $|\lambda_1| < 1 < |\lambda_3|$

and $|\lambda_1| < |\lambda_2| < |\lambda_3|$

Say $|\lambda_3| \leq 1 \Rightarrow |\lambda_i| \leq 1$

$$A = \begin{pmatrix} 1 & a & c \\ 0 & 1 & b \\ 0 & 0 & 1 \end{pmatrix}$$

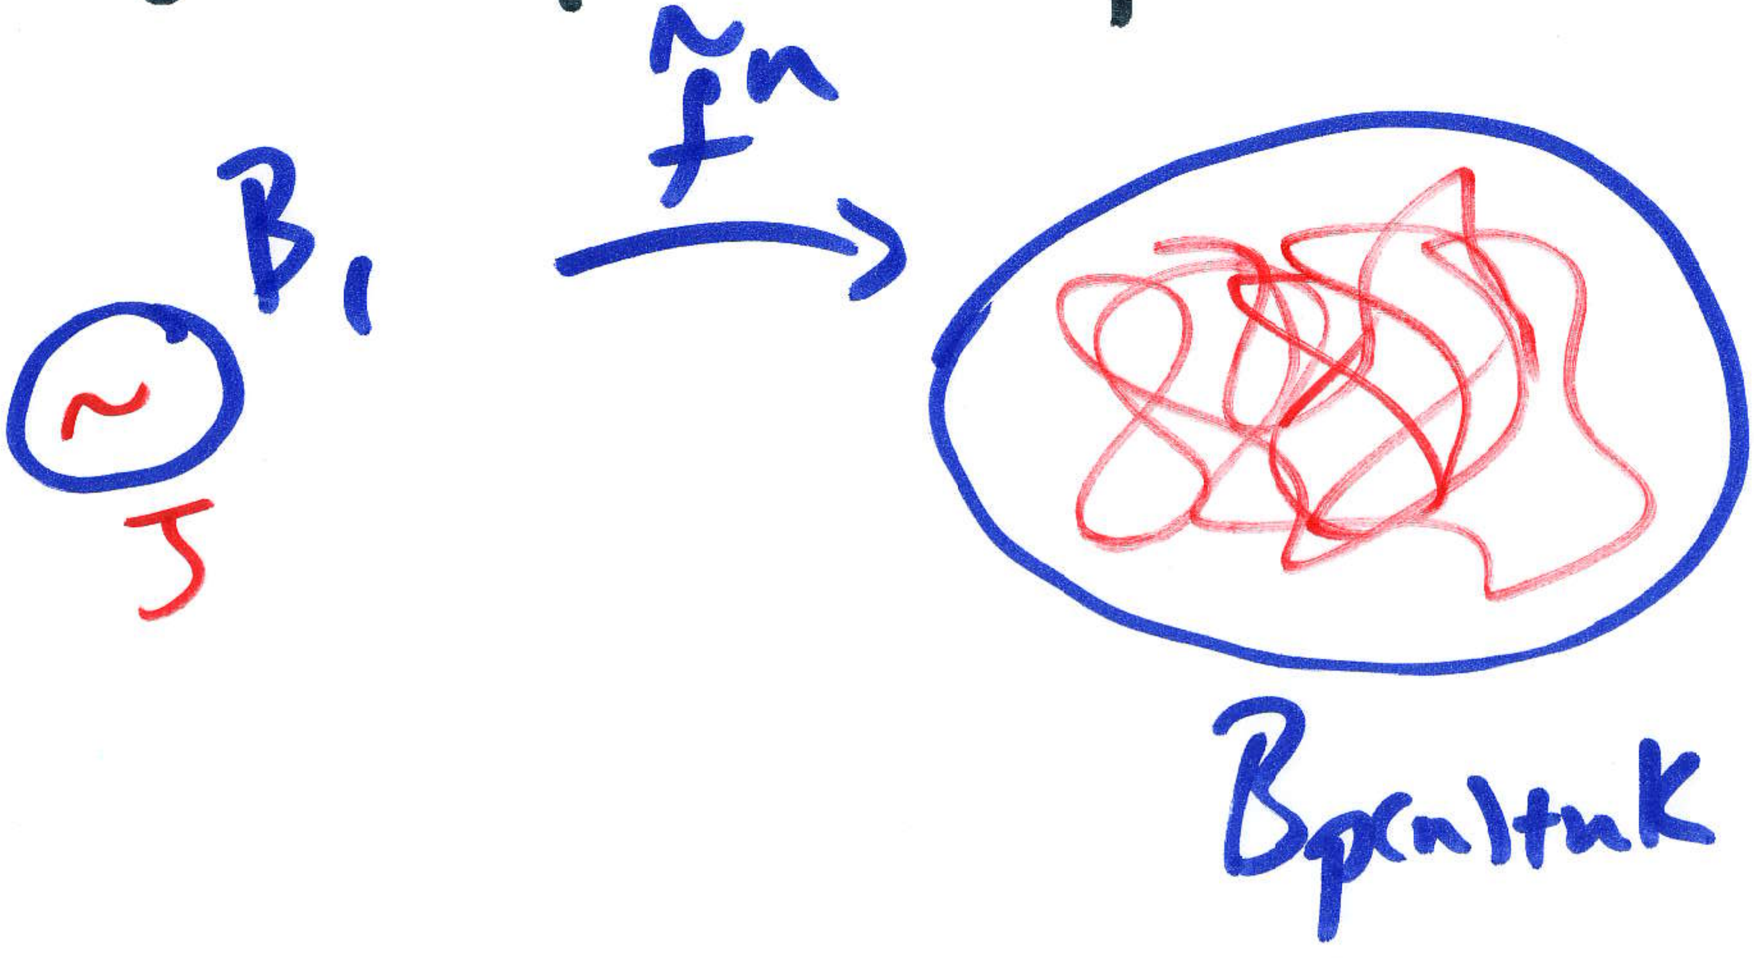
$$B_N = \{x \in \mathbb{R}^3 : \|x\| < N\}$$

$$\tilde{A}^n B_1 \subset B_{p(n)}$$

$$A_* = f_* \qquad \|\tilde{A} - \tilde{f}\|_{0 \text{ on } \mathbb{R}^3} < K$$

$$\|\tilde{A}^n - \tilde{f}^n\| < nK$$

$$\tilde{f}^n B_1 \subset B_{p(n)+nK}$$



$a \cdot \mu^n \le C \cdot \text{length } \tilde{f}^n J \le \text{volume } U_1(\tilde{f}^n J)$

$(\mu > 1)$

$\le \text{volume } B_{p(n)+nK+1}$

$\sim (p(n)+nK+1)^3$

$\Downarrow$

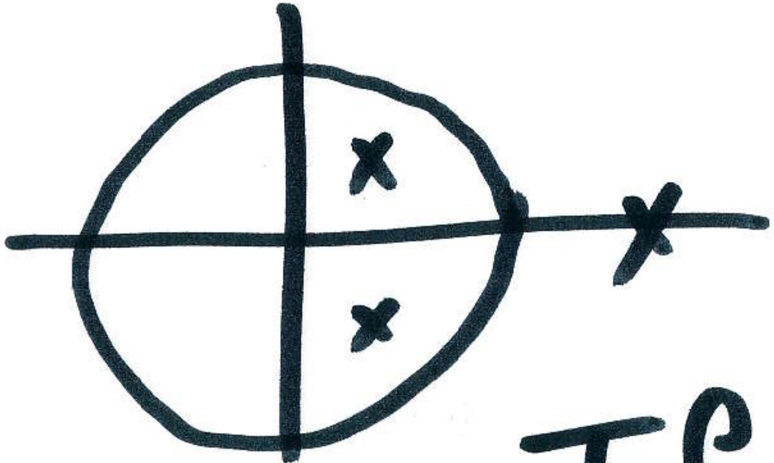
$\cancel{|\lambda_3| \le 1}$

$|\lambda_1| < 1 < |\lambda_3|$

A p.h.

$$|\lambda_1| < |\lambda_2| < |\lambda_3|$$

$$|\lambda_1| < 1 < |\lambda_3|$$



If $f : \mathbb{T}^3$ is p.h.

$A : \mathbb{T}^3 \circlearrowleft$ linear and $f_* = A_*$

then A is p.h.

M non-trivial circle bundle over $\mathbb{T}^2$.

nilmanifold.

$$0 \to S^1 \to M \to \mathbb{T}^2 \to 0$$

$$0 \to \mathbb{Z} \to \pi_1(M) \to \mathbb{Z}^2 \to 0$$

$\tilde{M} = \mathcal{H}$ Heisenberg space.

$\pi_1(M)$ is nilpotent

Malcev $f : M \circlearrowleft$ nilmanifold

$f_* : \pi_1(M) \circlearrowleft$

$\exists$ algebraic map $\Phi : M \circlearrowleft$

s.t. $\Phi_* = f_*$. $A \in GL(2, \mathbb{Z})$

(v,t)

$\Phi(v,t) = (Av, p(v,t))$

p is a quadratic poly.

$$\begin{tikzcd}
0 \arrow[r] & \mathbb{Z} \arrow[r] \arrow[d, "\pm Id"] & \pi_1(M) \arrow[r] \arrow[d, "f_* = \Phi_*"] & \mathbb{Z}^2 \arrow[r] \arrow[d, "A"] & 0 \\
0 \arrow[r] & \mathbb{Z} \arrow[r] & \pi_1(M) \arrow[r] & \mathbb{Z}^2 \arrow[r] & 0
\end{tikzcd}$$

A has eigs λ and λ^{-1}

If $|\lambda| \leq 1$

In Heisenberg space

$$\mathrm{vol}(B_R) \sim R^4$$

polynomial growth

$\cancel{|\lambda| \leq 1}$

$|\lambda^{-1}| < 1 < |\lambda|$ $\quad$ Φ is a P.h. skew product.

$A \in GL(2,\mathbb{Z})$ hyperbolic.

$$M_A = \mathbb{T}^2 \times \mathbb{R} \big/ (Ax,t) \sim (x,t+1)$$

$$0 \to \mathbb{Z}^2 \to \pi_1(M_A) \to \mathbb{Z} \to 0$$

$$\pi_1(M_A) = \mathbb{Z}^2 \rtimes_A \mathbb{Z}$$

solvable but not nilpotent.

$0 \longrightarrow$

f time one map of flow

$$\frac{\mathrm{Id} = f_* : \pi_1(M_A) \circlearrowleft}{f : M_A \circlearrowleft \text{ p.h.}}$$

$\exists\, n \geq 1$ and a lift $\tilde{f}^n : \tilde{M}_A \circlearrowleft$

so $f^n_* = \mathrm{Id}$.
